

# HOUSTON COMMUNITY COLLEGE SYSTEM

Katy Mills Workforce Training & Child Care Facility – Katy, Texas

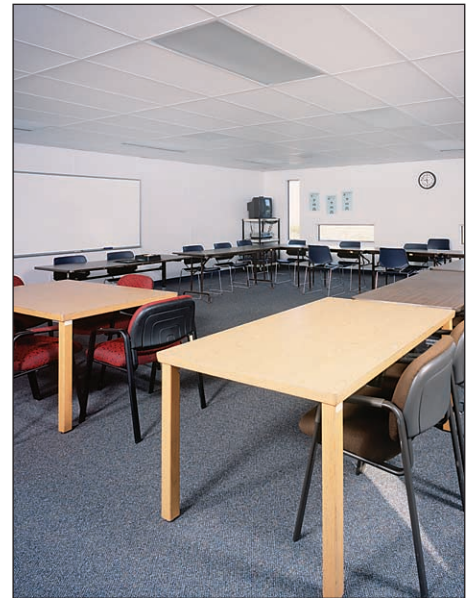

## Client Project

Adjacent to Katy Mills Mall in Katy, Texas, the **Houston Community College** wanted to create a System Childcare Center and Workforce Training Center in order to provide affordable education, healthcare and daycare programs to underprivileged adults. The Workforce Training Center would allow people to acquire skills in various fields and offer them the opportunity for employment within the surrounding community. The Childcare Center, administered through a contract between HCCS and Katy's Early Childhood Enrichment Center, would provide a safe, enriching learning environment for children.

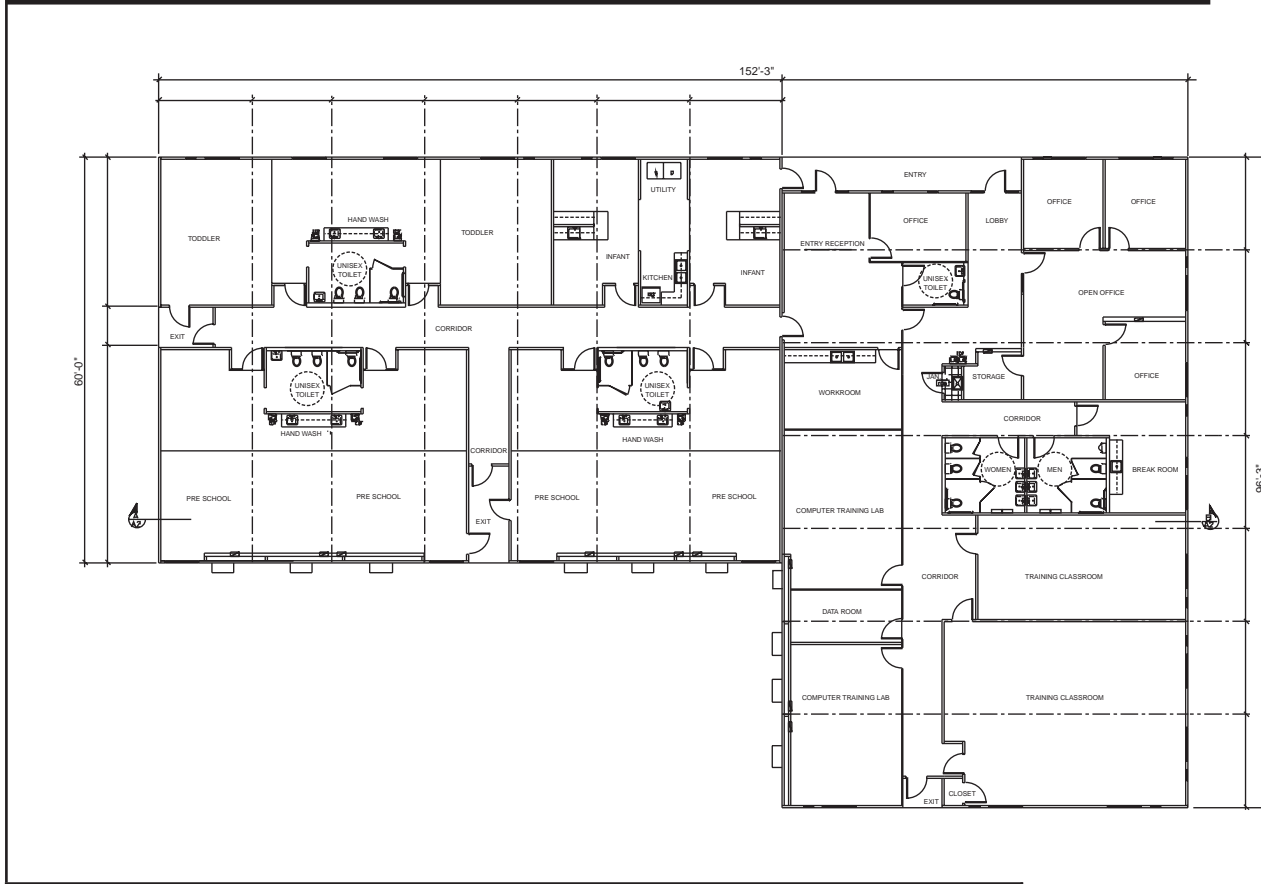

## Client Need

**Houston Community College** needed to build a new facility to accommodate the adult education classes and daycare program. They chose modular construction due to a limited time frame. **Houston Community College's** primary contractor awarded the project to **Williams Scotsman** because of their design-build capabilities. Katy Mills Mall was originally opposed to modular buildings on its premises, so **Williams Scotsman** assisted the college with a design concept that had a more permanent appearance.

## Katy Mills Workforce Training & Child Care Facility – Katy, Texas

## The Williams Scotsman Solution

Williams Scotsman provided a custom 11,520 square foot building with an “L” shaped configuration. This configuration was used to provide two distinct areas, one being conducive to the childcare aspect and the other appropriate for a training center. A main entry canopy was designed and constructed by Williams Scotsman, contributing to the permanent look of the building. The addition of hardi-panel stucco exterior siding, vivid color combinations and geometrically configured windows helped to finish the appearance.

## The Result

Houston Community College was excited with their new modular building from Williams Scotsman. The completed building exceeded their expectations. “We are quite pleased with the results. The building meets our quality requirements, is highly functional, and aesthetically pleasing. We have received many compliments.” Dr. Lee Murdy, Houston Community College Representative
